Packet Capture Tools : Wire Shark.

AIM:

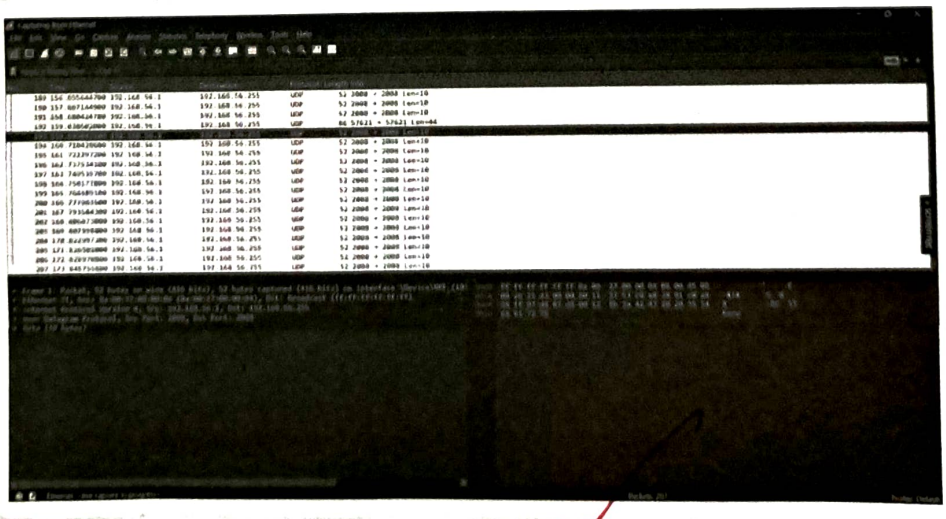

To experiment on Packet capture tool: Wire shark.

DESCRIPTION:

Wireshark, a network analysis tool formerly known as Ethereal, captures packets in real time and display them in human readable format. Wireshark includes filters, color coding, and other features that let you dig deep into network traffic and inspect individual packets. You can use wireshark to inspect a suspicious program's network traffic, analyze the traffic flow on your network, or troubleshoot network problems.

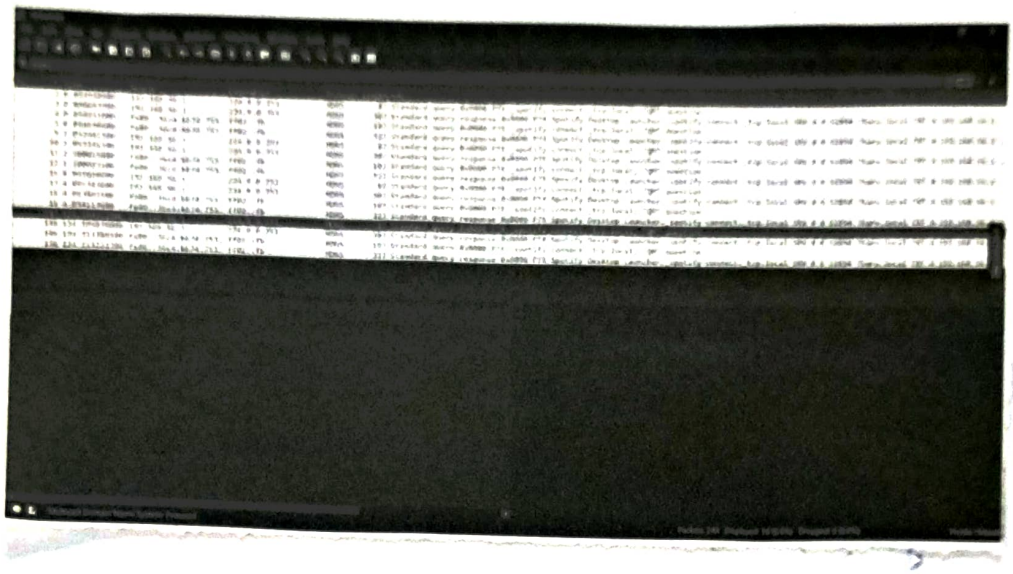

CAPTURING PACKETS:

After downloading and installing Wireshark, launch it and double-click the name of a network interface under Capture to start capturing packets on that interface. If you have promiscuous mode ~~embedded~~ enabled you'll also see other packets on the network instead of only packets address to your network adapter.

FILTERING PACKETS

If you're trying to inspect something specific, such as the traffic a program sends when phoning home, it helps to close down all other applications using the network so you can narrow down the traffic. Still, you'll likely have a large amount of packets to sift through. That's where Wireshark's filter come in.

RESULT: Thus the experiment was successfully done
