Exp no: 08 Nmap using Try Hack Me
17.09.2026

AIM:

To discover live host on a network using Nmap host discovery scans - ARP scan, IMP scan and TCP/UDP ping scan - and to understand which protocol operates on which layer of TCP/IP model and when each one applies.

ARP Host Discovery:

$ sudo nmap - PR - sn 10.200.6.0/24

O/P Starting NMap 7.80 (https://nmap.org)
NMap scan report for 10.200.6.1
Host is up
Nmap done: 256 IP address (1 host up)
scanned in 10.51 seconds.

ICMP Host Discovery

ICMP Echo (-PE)

$ sudo nmap - PE

Nmap scan report

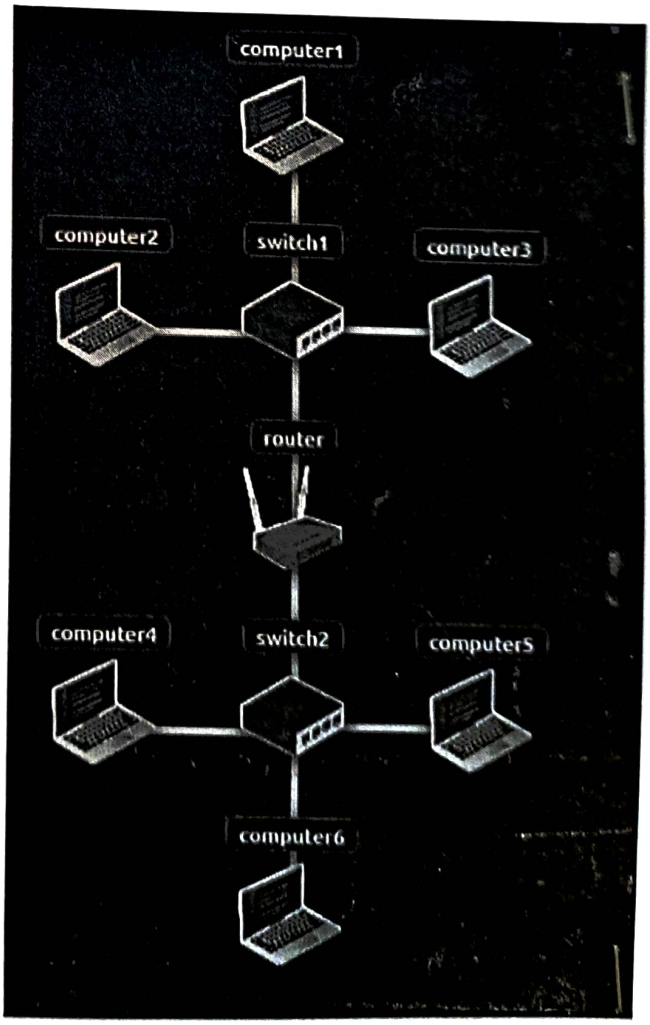

Host is up (0.06

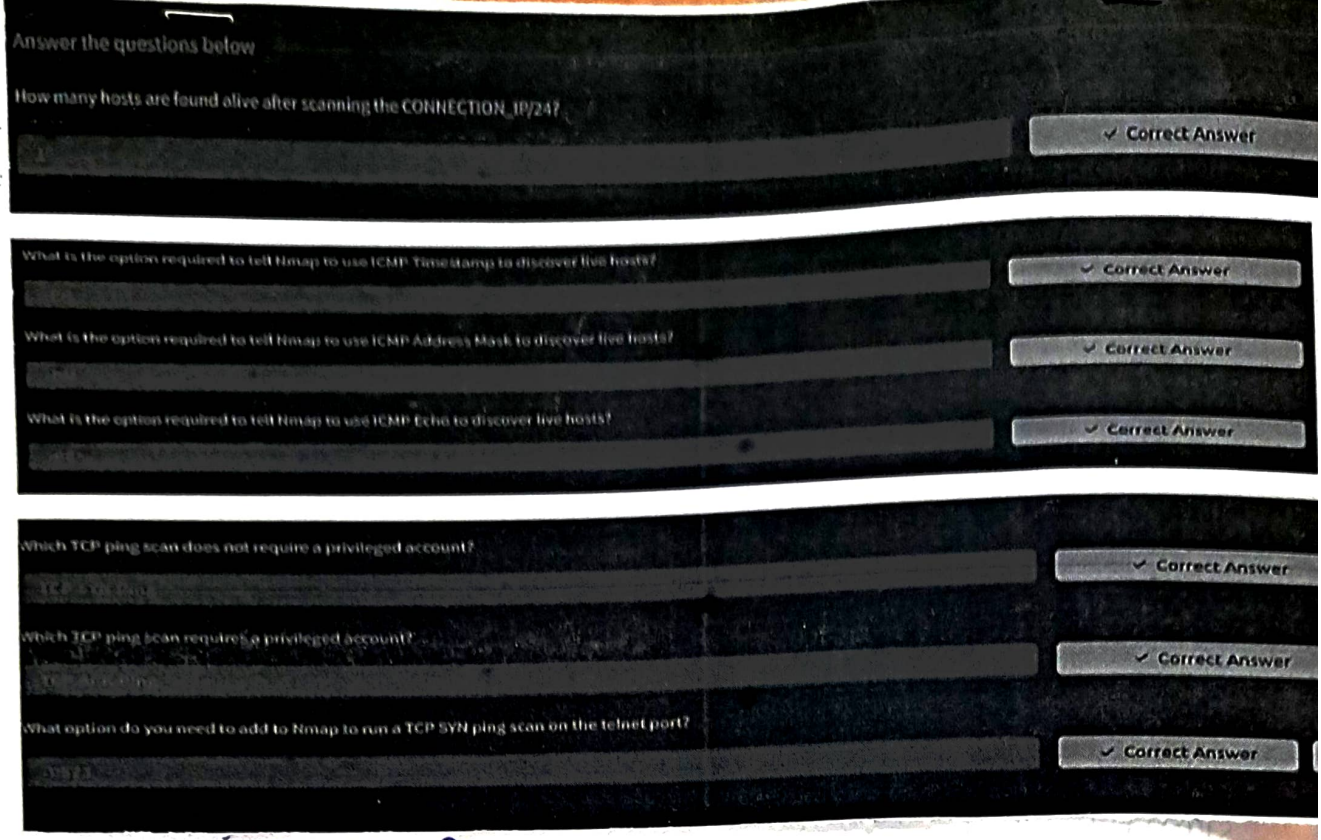

NMap scan report

Host is up (0.06

NMap done: 256 I

Scanned in 3.38 s

(i) UDP Ping

```
$ sudo nmap -PU -sn 10.200.6.0/24
Nmap scan report for 10.200.6.50
Host is up (0.070 Latency)
Nmap scan report for 10.200.6.250
Host is up (0.069 latency)
Nmap done: 256 IP address (2 Hosts up)
    Scanned in 35.97 seconds.
```

Mascan - A Faster Alternative

```
$ masscan 10.200.6.0/24 -P443
$ marscan 10.200.6.0/24 -P80,443
$ marscan 10.200.6.0/24 -P22-25
```

RESULT:

Thus Host discovery for ARP, ICMP, TCP/UDP was studied and the output is verified successfully.
